

INTERNSHIP REPORT

Academic Process Mining Fundamentals

Submitted by

Priyanshu Gangwar

Internship / Learning Period

22 July 2026 onwards

Certificate Issuing Date

28 August 2026

This report documents the learning outcomes and practical competencies associated with the Academic Process Mining Fundamentals credential.

Prepared on the basis of the uploaded credential information.

1. Introduction

This internship report presents the learning covered under the **Academic Process Mining Fundamentals** credential. According to the provided certificate, the learner is expected to understand the science of Process Mining within Celonis Views and use Celonis to analyze process data and identify value opportunities.

2. Internship Details

Student Name	Priyanshu Gangwar
Program / Learning Area	Academic Process Mining Fundamentals
Starting Date	22 July 2026
Certificate Issuing Date	28 August 2026
Credential Platform	Credly
Credential	Academic Process Mining Fundamentals

3. About Process Mining

Process Mining is concerned with examining process data to understand how processes are actually carried out. The credential specifically focuses on the use of Celonis Views for working with process information and identifying opportunities for improvement.

4. Learning Objectives

The learning objectives supported by the supplied credential information are:

- Describe the science of Process Mining inside Celonis Views.
- Apply Process Mining concepts within Celonis Views.
- Use Celonis to analyze process data.
- Identify value opportunities from process analysis.

5. Skills and Competencies Developed

During the learning period, the key competencies represented by the credential include understanding Process Mining concepts, working with process information in Celonis Views, analyzing process data, and recognizing areas where process analysis can reveal opportunities to create value.

6. Practical Application

The credential indicates an ability to apply Process Mining within Celonis Views. A practical Process Mining workflow involves examining available process data, understanding process behavior through the provided views, and using the resulting analysis to identify potential value opportunities.

7. Learning Outcomes

At the completion of the learning activity, the documented outcome is the ability to describe and apply the science of Process Mining inside Celonis Views. The learner can also use Celonis to analyze process data and identify value opportunities.

8. Conclusion

The Academic Process Mining Fundamentals credential represents learning in Process Mining and its application through Celonis Views. The main focus is on understanding Process Mining, analyzing process data using Celonis, and recognizing value opportunities through process analysis. This report records the learning details using the requested student name and dates.

Source Credential Information

The uploaded credential identifies the original badge holder as Devranjan Raut, names the credential as Academic Process Mining Fundamentals, gives the date as Aug 22, 2026, and states the associated learning outcomes. This report has been prepared with the requested name and dates supplied by the user.
